

Gain visibility and control with Dropbox Business

Dropbox Business turns your team's productivity tool of choice into the secure tool for getting work done. With end-to-end visibility and powerful yet flexible controls, you can protect your team's most important work — inside or outside the office.

- **Visibility through adoption:** As the tool employees already rely on to get work done, you can expect widespread adoption when bringing Dropbox into your organization. The result: a central home for data that breaks down silos and provides true visibility.
- **Controls that scale:** Easy-to-use controls help you manage your team even as users and data usage grow—so your IT organization can spend time on what matters most.
- **Powerful API integrations:** The Dropbox platform helps you integrate Dropbox Business into your existing IT architecture and extend control with best-in-class enterprise solutions.

Visibility and insights

Understand Dropbox usage at your company, at a high level or with detailed logging

- Admin dashboard: Track team members, user onboarding, and storage at a high level
- Detailed audit logs: Deep-dives on user activity, file events, sharing, apps, sessions, and devices
- Members: Manage permissions by user and pull individual activity reports

Content management

Manage sharing and file access within your organization and with external partners

- Sharing permissions: Set restrictions on sharing and collaboration inside or outside the team
- Collaboration settings: Enable/disable Commenting, File Requests, or permanent deletions
- Team folder manager: Centrally manage access to team folders, and choose which folders sync to employee computers by default

Authentication and device security

Keep users and company data protected whenever, wherever

- Require two-step verification: Ensure an extra layer of protection for select individuals or the whole team
- Separate work and personal Dropboxes: Help employees keep work and personal data separate, and restrict two-account on employee devices
- Unlink and remote wipe devices: Clear files devices if they're lost or stolen, or when an employee leaves the team

Team management

Speed up deployment, onboard and offboard users, and manage file access at scale

- Domain management: Gain control of personal Dropbox usage on your company domain and bring personal users onto the business account
- SSO and AD integration: Seamlessly create or remove accounts using Active Directory integration, and streamline authentication with SSO
- Groups: Create company-managed groups (or import from Active Directory) to manage file access by team or project
- Account transfer: Transfer files from one user to another to maintain business continuity during offboarding
- Suspend user: Suspend accounts in between contractor projects, or when an employee goes on leave
- Assume user: Gain visibility into specific users' Dropbox accounts
- Tiered admin controls: Grant varying levels of management capabilities to your IT team
- Enterprise installer: Install Dropbox remotely on Windows machines via managed software solutions and deployment mechanisms

“We put a lot of our proprietary design data, texture data, and other sensitive information on Dropbox, so it is paramount that we protect it in a way that only the right people can have access to it.”

Dropbox Business API

Building on the power of the Dropbox Platform, our enterprise solutions extend the capabilities of Dropbox Business while integrating seamlessly into your core IT processes and existing solutions. With products developed by industry-leading providers, you can scale your deployment, meet specific regulatory requirements, and extend control of sensitive information. The Dropbox Business API includes integrations for:

- Data Loss Prevention: Monitor data flow and apply policies to protect sensitive information
- Digital Rights Management: Further regulate encryption and data access
- Security Information and Event Management: Collect, monitor, and analyze security and infrastructure log data
- eDiscovery: Streamline the legal discovery process
- Data migration and on-premise backup: Scale and secure the migration of data into Dropbox
- Identity management: Integrate with company directory services to simplify deployment, automate provisioning, and improve user management
- Custom applications: The Dropbox Business API also enables businesses to build custom applications on top of the Dropbox platform

“With Dropbox Business, we are totally in control of who is going to see what and when and for how long. Whether we’re bringing on a new employee or keeping the sales team up to date, we can provide them with the exact right knowledge, at the right place, at the right time.”

— **Jon Erik Andersgaard, Sales Support Leader, Orkla Foods**
