Endpoint Security
Cloud

Strong on protection Easy on management

Cyber threats are constantly evolving and attacks are increasing all the time.

Kaspersky Endpoint Security Cloud simplifies security management – without losing control or investing in additional hardware. Strong on protection, easy on management, it gives you the powerful controls and security you need, managed from a single easy-to-use console. You manage your company's protection, we take care of the rest.

Secure multiple platforms

Windows and Mac Endpoints

Windows file servers

iOS and Android devices

Up and running in no time, protected in minutes

Kaspersky Endpoint Security Cloud enables small and medium-sized businesses to reduce costs and resource overheads by managing multiple endpoints, mobile devices and file servers remotely, from anywhere.

And because everything is managed from one ready-to-run, intuitive web console, there's no need to buy additional hardware – all security settings can be managed from any connected device.

For companies with limited in-house expertise, Kaspersky Endpoint Security Cloud can ensure security doesn't detract from other tasks – your entire corporate network stays protected, even if you only have 15 minutes to spend on IT security:

- Pre-configured security profiles can be automatically applied to any connected device – saving time on security configuration
- Comprehensive step-by-step instructions guide you through the security setup process

Most tested, most awarded Next Generation security

Kaspersky Endpoint Security Cloud protects your business from known and unknown threats – including cryptors and other ransomware attacks. Multiple layers of pro-active security include:

- Next Generation technologies, including dynamic and static machine learning for detection and protection against the very latest threats
- Next Generation, cloud-assisted threat intelligence powered by Kaspersky Security Network
- The world's most tested, most awarded¹ security

¹ In 2017 Kaspersky Lab products participated in 86 independent tests and reviews, achieving 72 firsts and 78 top-three finishes. <https://www.kaspersky.com/top3>

Protection for mobile devices

Protect and manage Android and iOS devices against the latest threats, including:

- Anti-malware protection for Android-based devices
- Web controls manage online access from corporate devices
- Set connection rule for corporate Wi-Fi network
- Manage iOS devices and iOS-native features immediately – no dedicated iOS Mobile Device Management server required
- Password protection and anti-theft features (lock/locate*/wipe) ensure protection even if device is lost or stolen
- Application and compliance control for Android devices ensure full device protection

Ready, Set, Go!

All you have to do to get started with Kaspersky Endpoint Security Cloud is register. No management console to install, no training, no additional time to manage anything – you're up and running in minutes, protected immediately.

- Default security policies developed by Kaspersky Lab experts provide immediate protection
- User-based security management – security profiles are applied to users, not devices, ensuring consistency in all user's devices protection
- Multiple administrators for multiple workspaces – enable different administrators to manage one or several remote offices or branches

MSP-ready

Multi-tenancy capability makes it easy for Managed Service Providers to take care of security for multiple clients – from the same console, using same account.

Centralized, cloud-based management simplifies security

Kaspersky Endpoint Security Cloud is managed from Kaspersky Business Hub – a single console to manage protection of both endpoint and Office 365 mailboxes. One intuitive interface to manage:

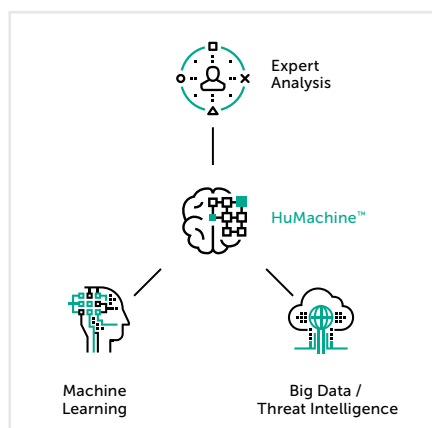

- Kaspersky Endpoint Security Cloud
- Kaspersky Security for Microsoft Office 365

Try it today for FREE!

See for yourself: access your FREE 30-day trial at cloud.kaspersky.com

If you decide to buy, all you have to do is pay for the license – because Kaspersky Endpoint Security Cloud will already be running on your endpoints during the trial, there's nothing for you to set up.

*not for iOS devices
